

# PG Airline Forecasting Game

## *Six Live Scenario Rounds — T061 to T066*

Participant-facing scenario sheet. Each round provides the business context and the quantitative scenario inputs required for forecasting. Organizer-only interpretations and hidden actuals are not included.

### **T061 — Round 1: Monsoon Disruption**

**t = 61 | Month of year = 7**

Heavy monsoon flooding disrupts operations in the Western region for much of the month. Leisure travel softens and a handful of flights face weather delays.

| Variable                  | Scenario Value | Unit / Coding |
|---------------------------|----------------|---------------|
| Summer vacation           | 0              | 0/1           |
| Monsoon                   | 1              | 0/1           |
| Festive holiday           | 0              | 0/1           |
| Wedding season            | 0              | 0/1           |
| Fuel price index          | 96             | Index         |
| Leisure demand index      | 101            | Index         |
| Corporate activity index  | 112            | Index         |
| Economy capacity          | 19,000         | Seats         |
| Premium capacity          | 2,200          | Seats         |
| Competitor capacity index | 106            | Index         |
| Average Economy fare      | 3,550          | Fare          |
| Average Premium fare      | 9,300          | Fare          |
| Promotion intensity       | 1              | 0-3           |
| Weather disruption index  | 8              | 0-10          |
| Special event flag        | 0              | 0/1           |

## T062 — Round 2: Fuel Duty Hike + Independence Day Weekend

t = 62 | Month of year = 8

The government raises excise duty on aviation turbine fuel, pushing up fuel costs noticeably. Partially offsetting this, the Independence Day long weekend gives a short leisure bump.

| Variable                  | Scenario Value | Unit / Coding |
|---------------------------|----------------|---------------|
| Summer vacation           | 0              | 0/1           |
| Monsoon                   | 1              | 0/1           |
| Festive holiday           | 1              | 0/1           |
| Wedding season            | 0              | 0/1           |
| Fuel price index          | 108            | Index         |
| Leisure demand index      | 113            | Index         |
| Corporate activity index  | 114            | Index         |
| Economy capacity          | 19,800         | Seats         |
| Premium capacity          | 2,250          | Seats         |
| Competitor capacity index | 108            | Index         |
| Average Economy fare      | 3,750          | Fare          |
| Average Premium fare      | 9,600          | Fare          |
| Promotion intensity       | 1              | 0-3           |
| Weather disruption index  | 4              | 0-10          |
| Special event flag        | 1              | 0/1           |

## T063 — Round 3: GST Rate Cut on Air Tickets

t = 63 | Month of year = 9

A cut in GST on air travel is announced, and the airline passes part of the savings to passengers via lower economy fares. Monsoon effects are fading and pre-festive booking activity is picking up.

| Variable                  | Scenario Value | Unit / Coding |
|---------------------------|----------------|---------------|
| Summer vacation           | 0              | 0/1           |
| Monsoon                   | 0              | 0/1           |
| Festive holiday           | 0              | 0/1           |
| Wedding season            | 0              | 0/1           |
| Fuel price index          | 99             | Index         |
| Leisure demand index      | 121            | Index         |
| Corporate activity index  | 116            | Index         |
| Economy capacity          | 20,200         | Seats         |
| Premium capacity          | 2,300          | Seats         |
| Competitor capacity index | 104            | Index         |
| Average Economy fare      | 3,400          | Fare          |
| Average Premium fare      | 9,200          | Fare          |
| Promotion intensity       | 2              | 0-3           |
| Weather disruption index  | 2              | 0-10          |
| Special event flag        | 0              | 0/1           |

## T064 — Round 4: Diwali Festive Peak

t = 64 | Month of year = 10

Diwali falls this month — the single biggest leisure and home-travel peak of the year. Capacity is stretched, fares firm up, and the airline runs a modest promotional push to capture share.

| Variable                  | Scenario Value | Unit / Coding |
|---------------------------|----------------|---------------|
| Summer vacation           | 0              | 0/1           |
| Monsoon                   | 0              | 0/1           |
| Festive holiday           | 1              | 0/1           |
| Wedding season            | 0              | 0/1           |
| Fuel price index          | 101            | Index         |
| Leisure demand index      | 145            | Index         |
| Corporate activity index  | 118            | Index         |
| Economy capacity          | 21,400         | Seats         |
| Premium capacity          | 2,400          | Seats         |
| Competitor capacity index | 103            | Index         |
| Average Economy fare      | 4,300          | Fare          |
| Average Premium fare      | 10,500         | Fare          |
| Promotion intensity       | 2              | 0-3           |
| Weather disruption index  | 1              | 0-10          |
| Special event flag        | 1              | 0/1           |

## T065 — Round 5: Wedding Season + Corporate Year-End Push

t = 65 | Month of year = 11

Peak wedding season drives strong leisure/family travel, while corporates ramp up travel ahead of calendar year-end board meetings and client visits — a strong month for Premium Economy specifically.

| Variable                  | Scenario Value | Unit / Coding |
|---------------------------|----------------|---------------|
| Summer vacation           | 0              | 0/1           |
| Monsoon                   | 0              | 0/1           |
| Festive holiday           | 0              | 0/1           |
| Wedding season            | 1              | 0/1           |
| Fuel price index          | 103            | Index         |
| Leisure demand index      | 139            | Index         |
| Corporate activity index  | 130            | Index         |
| Economy capacity          | 22,000         | Seats         |
| Premium capacity          | 2,500          | Seats         |
| Competitor capacity index | 102            | Index         |
| Average Economy fare      | 4,100          | Fare          |
| Average Premium fare      | 10,800         | Fare          |
| Promotion intensity       | 2              | 0-3           |
| Weather disruption index  | 1              | 0-10          |
| Special event flag        | 0              | 0/1           |

## T066 — Round 6: New Year Holidays Amid Budget Uncertainty

t = 66 | Month of year = 12

Christmas/New Year leisure travel stays strong, but corporates turn cautious on discretionary travel spend ahead of the upcoming Union Budget, creating a pull between resilient Economy demand and softer Premium Economy demand.

| Variable                  | Scenario Value | Unit / Coding |
|---------------------------|----------------|---------------|
| Summer vacation           | 0              | 0/1           |
| Monsoon                   | 0              | 0/1           |
| Festive holiday           | 1              | 0/1           |
| Wedding season            | 1              | 0/1           |
| Fuel price index          | 102            | Index         |
| Leisure demand index      | 132            | Index         |
| Corporate activity index  | 104            | Index         |
| Economy capacity          | 21,800         | Seats         |
| Premium capacity          | 2,450          | Seats         |
| Competitor capacity index | 101            | Index         |
| Average Economy fare      | 3,950          | Fare          |
| Average Premium fare      | 10,100         | Fare          |
| Promotion intensity       | 1              | 0-3           |
| Weather disruption index  | 1              | 0-10          |
